

***Agrosystems, Geosciences & Environment* serves vital role in the agriscience community**

June 18, 2020

Agrosystems, Geosciences & Environment

Agrosystems, Geosciences & Environment (AGE) is a journal with a mission to provide an outlet for articles that produced negative results, are limited in time or region, or are transferred from other journals because they fail to meet scientific standards, yet still contain valuable scientific information.

The journal is entering its third year of publication, and submissions are increasing. These submissions represent a vast range of crops, geographies, soil, climates, and research questions. The publication is an outlet for valuable research information that would otherwise be lost to the scientific community.

"I believe AGE serves a vital role in capturing information from research projects that help us understand both the positive and negative results of research questions," says

Editor Jerry L. Hatfield.

We are pleased with the response from our authors and continue to strive to build this journal to serve the agricultural community. We welcome your submission to AGE if you have research that is rigorous and scientifically valid and fits the scope of the journal.

Consult the author instructions and other information at

agronomy.org/publications/journals/author-resources/age-instructions. To

submit your article or to check on the status of an article in process, visit the online submission website, mc.manuscriptcentral.com/agrosystems.

Stay on top of the latest AGE research by following the journal on

Twitter—@AGEjournal—and signing up for email alert updates at
